Homework Assignment: 3
Name: Jonathan Gaines
Date: 4/19/2017

---

1. Job Optimization

(a)

Solution	Time Slot 1	Time Slot 2	profit
1	Job 1	Job 3	55
2	Job 3	Job 1	55
3	Job 2	Job 1	65
4	Job 2	Job 3	60
5	Job 4	Job 1	70
6	Job 4	Job 3	65
7	Job 1	N/A	30
8	Job 2	N/A	35
9	Job 3	N/A	25
10	Job 4	N/A	40

(b) The optimal schedule has Job 4 in timeslot 1 and Job 1 in timeslot 2 for a profit of $70.

(c) A high level greedy algorithm would choose the largest profit with a deadline of 1 or 2, then choose the largest profit with a deadline of 1. In this case, it would choose Job 4, then Job 1.

2. Dynamic Programming: Change Making

(a) The minimum number of coins needed to meet the amount is 3.

(b) Minimum coin combinations include {1, 2, 5} and {3, 3, 3}

(c)

n	0	1	2	3	4	5	6	7	8	9
$f(n)$	0	1	2	1	2	1	2	3	2	3

(d)

```
Change-making(D[j], n):
        f[0] = 0
        for i = 1 to n do
                temp = -100
                j = 1
                while j $\leq$ m and i $\geq$
                        temp = min(f(i-D[j]),
                        j = j + 1
                f[1] = temp + 1
        return f(n)
```

3. Dyanmic Programming: Knapsack Problem

(a)

(b)

(c)

4. Greedy Algorithm

   (a)

   (b)

   (c)
