Homework Assignment: 3 Name: Jonathan Gaines

Date: 4/19/2017

1. Job Optimization

	Solution	Time Slot 1	Time Slot 2	profit
	1	Job 1	Job 3	55
	2	Job 3	Job 1	55
	3	Job 2	Job 1	65
	4	Job 2	Job 3	60
(a)	5	Job 4	Job 1	70
	6	Job 4	Job 3	65
	7	Job 1	N/A	30
	8	Job 2	N/A	35
	9	Job 3	N/A	25
	10	Job 4	N/A	40

- (b) The optimal schedule has Job 4 in timeslot 1 and Job 1 in timeslot 2 for a profit of \$70.
- (c) A high level greedy algorithm would choose the largest profit with a deadline of 1 or 2, then choose the largest profit with a deadline of 1. In this case, it would choose Job 4, then Job 1.

2. Dynamic Programming: Change Making

- (a) The minimum number of coins needed to meet the amount is 3.
- (b) Minimum coin combinations include $\{1, 2, 5\}$ and $\{3, 3, 3\}$

(d) Change-making(D[j], n):

$$\begin{split} f[0] &= 0 \\ \text{for } i &= 1 \text{ to n do} \\ &\quad temp = \infty \\ &\quad j &= 1 \\ &\quad while \ j \leq m \ \text{and } i \geq D[j] \ \text{do} \\ &\quad temp = \min(f(i\text{-}D[j]), \ temp) \\ &\quad j &= j+1 \\ &\quad f[1] &= temp + 1 \\ \text{return } f(n) \end{split}$$

3. Dyanmic Programming: Knapsack Problem

```

           0
              0
                  50
                      50
                          50
                               50
                                   90
                                       90
                                            90
                                                90
```

- (b) The optimal subset has a value of \$90 and consists of items 2 and 4.
- (c) Knapsack(vals[], weights[], w):

```
\begin{split} n &= \operatorname{len}(\operatorname{vals}[]) \\ &\text{for } j \text{ from } 0 \text{ to } w; \\ &\quad m[0,\,j] = 0 \\ &\text{for } i \text{ from } 1 \text{ to } n; \\ &\quad \text{for } j \text{ from } 0 \text{ to } w; \\ &\quad if \text{ weights}[i] \not j \text{ } j; \\ &\quad m[i,\,j] = m[i\text{-}1,\,j] \\ &\quad \operatorname{else}: \\ &\quad m[i,\,j] = \max(m[i\text{-}1,\,j],\,m[i\text{-}1,\,j\text{ - weights}[i]] + \operatorname{vals}[i]) \\ &\text{return } m[n,\,w] \end{split}
```

- 4. Greedy Algorithm
 - (a)
 - (b) 10000110111
 - (c) BADFAD
